

Demand Regulator Breathing Mask System

Ref: CX 0120

Description of the equipment:

The patient breathes either oxygen or the oxygen-enriched mixture from the regulator.

The respiratory system allows patients to inhale a different breathing mixture than the ambient atmosphere inside the hyperbaric chamber. It has been specifically designed for breathing oxygen-rich mixtures used in hyperbaric oxygen therapy or by divers during decompression in a chamber.

Exhaled respiratory gases are discharged outside through the venting system to maintain an acceptable oxygen concentration within the chambers.

The system is composed of:

1. Inhalation mask (available in different sizes) : Ref: CX 0146
2. Facial regulator : Ref: CX 5683
3. Annular hose for venting : Ref: CX 0119
4. Venting device : Ref: CX 0048
5. Therapeutic gas supply hose : Ref: CX 0121
